#### RESEARCH EXPERIENCE

☐ MSc Thesis: Local Solution to Electro-Capillary Phenomenon near Sharp Corner 10-2022 - 09-2023

- Studied the behaviour of the voltage local to the triple contact point (TCP) for the Electrowetting phenomenon
- Derived Eigenvalue condition near the TCP and displayed the corresponding equipotential lines do not form eddies
- □ BSc Thesis: Numerical Methods for Solutions of One Variable Nonlinear Equations 07-2019 06-2021
  - Categorised methods developed over last 250 years in four families and devised an analogy for interconversion
  - Developed a set of methods in fixed-point family and implemented different methods to solve non-linear equations
  - Showcased the fixed-point family as the most efficient and stable; conference proceeding as as result of the thesis: 1
- □ BSc: Research Collaboration: Novel formulae for series involving Floor and Ceiling functions 06-2019 04-2022
  - Derived 40+ novel results involving the Floor and Ceiling functions using two proved theorems
  - Provided generalisations of different infinite series as well as some cases of Generalised Dirichlet series such as (Riemann, Hurwitz, Lerch) Zeta functions and Polylogarithms; articles as a result of the collaboration: 2 (I, II)
- □ BSc: Project II: Applications of the Fuzzy Set Theory

01-2018 - 04-2019

- Derived the solution for second order Cauchy-Euler equation using generalised trapezoidal intuitionistic fuzzy numbers
- Fuzzified generalized Newton Raphson type method to solve one variable equations; articles as a result of project: 4
- □ BSc: Project I: Fixed Point Theory and Numerical Methods

08-2017 - 11-2019

- Obtained a formula that provides exact number of iterations required based on initial guess for the fixed-point method
- Amalgamated the Fixed-Point and Newton Raphson method to display that the integrated methods converge faster than the original pair; article and conference proceeding as a result of project: 2
